JAYCO OFFERS MOR/RYPDE SUSPENSION ON LEGACY TOWABLES

ELKHART, Ind. — Jayco’s latest line of luxury, high-end towables offers RVers a premium rubber suspension system from MOR/ryde International to enhance ride performance.

MOR/ryde’s IRE integrated suspension system is an optional upgrade on all models in Jayco’s 2004 Legacy® fifth-wheel lineup. The upscale Legacy series features residential-style comforts and sophisticated interior components, underscoring the need for a smooth, stable ride.

“Our Legacy customers are looking for quality features that will enhance the RV experience,” stated Jayco Director of Marketing Sid Johnson. “Generally, they are veteran RVers who understand the need for comfortable, stable towing performance. The MOR/ryde suspension system meets those high standards.”

The IRE adds a new dynamic to factory installed leaf spring systems by replacing the steel spring equalizer with MOR/ryde’s rubber shear springs. The rubber springs absorb road shock and increase suspension travel for smoother towing, while protecting the RV and its interior components from damaging impact.

The IRE integrated system is also designed with adjustment capabilities that accommodate the varying heights of today’s tow vehicles, particularly pickup trucks.

MOR/ryde designs and manufactures rubber suspension systems for versatile vehicle applications in a variety of industries, including recreation vehicle. Jayco is one of the RV industry’s largest privately held manufacturers and produces a complete line of camping trailers, travel trailers, fifth wheels, park trailers, and Type C motorhomes.
