GOOD CARE STARTS WITH A SMOOTH RIDE.
Good care starts with a smooth ride.

The MOR/ryde “Airless Suspension”

Rubber shear springs isolate and absorb road shock to provide a softer, more comfortable ride.

Better protection for the vehicle, equipment, and contents from harsh roads.

Smother ride quality for EMT’s and patients needing medical care.

Today’s roads are rougher than ever

That is why MOR/ryde designed the RS Suspension System for ambulances. Whether it is chuck holes, dirt roads, or railroad tracks, the MOR/ryde RS Suspension works to absorb the harsh road shock. After all, good care starts with a smooth ride.

At the heart of every MOR/ryde suspension system are unique rubber shear springs. MOR/ryde incorporates rubber’s natural ability to isolate and absorb road shock into a suspension system that works in concert with the existing leaf spring suspension system. The result is a suspension system that provides ambulances with a smoother ride. In addition, the smoother ride will translate into greater comfort for the EMT providing medical care and the patient receiving the medical attention.

The MOR/ryde system can be aftermarket installed onto existing units in your fleet or can be special ordered on new ambulances from select manufacturers. Each MOR/ryde system provides excellent ride quality improvement and requires minimal maintenance to sustain optimal performance.
